ABSTRACTED-PUB-NO: DE 2130547A

BASIC-ABSTRACT:

High purity CrO<sub>2</sub> is obtd. by oxidising metallic Cr, opt. passivated, with oxides of chromium having valence above 4, pref. CrO<sub>3</sub>, at 300-500 degrees C pref. 360-420 degrees under a pressure of 5-300 atm pref. 30-80. The process is simple and inexpensive.

The product is suitable for use in magnetic recorders. The metallic Cr is pref. powdered of particle size 0.01-0.5 mu.
